

SAMOD Modulating (stand alone) Damper Control

The SAMOD is an auto changeover thermostat designed to control a fully modulating stand alone supply damper or diffuser/damper. It is equipped with an accurate duct sensor to facilitate changeover.

The AXMOD has all the features of the SAMOD but includes auxiliary heat contacts to energize a supplemental heating source.

The SAMOD or AXMOD thermostat display:

- A. Room temperature
- B. Supply air temperature
- C. Damper position

This is a great control for adding thermostats to a duct system, when only one thermostat was originally installed to control many rooms.

**A complete SAMOD System
consists of the following components:**

1. SAMOD or AXMOD Thermostat Duct Sensor (Included)
2. Modulating Zone Damper
3. 40 VA Transformer (Field Supplied)
